Description: online book store

The Online Book Store is a website where users can search, view, and buy books online. The project helps people find books easily without visiting a physical store. Users can browse different categories like fiction, science, history, and more. They can see book details such as title, author, price, and ratings, and add books to their cart for purchase.

The website also includes a simple recommendation feature that shows books based on user interests or popular choices. Users can create an account, give reviews, and check out safely.

Admins can manage the store by adding new books, updating details, or removing books. This project makes book shopping fast, easy, and convenient for everyone.
